

FSK-VTE-001

GEKO Venous Thromboembolism (VTE) Prevention Study

MAY 2024 NEWSLETTER

RECRUITMENT

49 / 1200 participants enrolled

MOST RECENT ENROLMENTS: Royal Stoke University Hospital and Fairfield General Hospital, 22 May 2024!

After an amazing enrolment streak in May, Royal Stoke University Hospital is now leading with **17 participants** enrolled!

Special mention this month goes to Royal Bournemouth Hospital who managed to enrol **3 participants** within the span of a week!

A **HUGE** thank you to all study sites for their continuing efforts to screen and enrol study participants.

Please do keep on screening for new patient study participants!

NON-SUBSTANTIAL AMENDMENT!

Main changes applicable to our active study sites:

90 day Telephone Worksheet

For Day 90 follow-up, the introductory script has been updated to make the call more streamlined. Please feel free to use or adapt as you see fit!

Section 1 can be collected from the patient's medical notes / records (e.g. DVT occurrences, PE occurrences etc). So during the phone call follow-up, you only need to confirm these details. Section 2 still asks the patient for feedback e.g. leg pain and completion of the patient questionnaires.

EQ-5D

EQ-5D Interviewer version has an introductory script you can utilise.

Device Acceptability Questionnaire

Device Acceptability questionnaire updated and mirrors the EDC setup: Device Acceptability Questionnaire at Day 14 and Device Information & Log in Study Level Forms.

→We are working to update the EDC to reflect these amendments to the wording for the EQ-5D and 90 day Telephone Worksheet. To be announced once updates are deployed.
